

Complexity	Bot Type	Scope Description	Effort Estimates (In Days)	Scale up rules/Comments
Simple	Structured	1 Static journey upto 20 steps	1	-Includes specific logical cases/conditional handling, if any -For every additional 10 steps involving logic = +6 hours -Every additional language will require ~50% of the base implementation effort.
	Structured + API	Structured journey upto 20 steps and 5 API calls	1.5	-For every additional 10 steps involving logic = +6 hours -For every additional 2 APIs = +4 hours -Every additional language will require ~50% of the base implementation effort.
	WA Static Flows	Journey with Static flow screen (1 journey and upto 5 screens)	1	-For every new screen = 2 hours
	Agentic AI	Static FAQ Training data - Text readable PDFs / CSV files / Website / PDF with images & Tabular Data)	1	-Total hours might vary based on time taken by Agent to train the training data.
Medium	Structured + API	1 journey with up to 20 steps and 2 APIs along with encryption/decryption handling and specific logic	2	-For every additional 10 steps involving logic = +6 hours -For every additional 2 APIs = +4 hours -Every additional language will require ~50% of the base implementation effort.
	WA Flows Dynamic	Journey with Dynamic flow screen (max 5 screens + 5 API's)	4	-For every new screen = 2 hours
	Catalog	Journey with Catalog with any number of products without native payment (upto 20 steps and 3 API's)	3	
	Native Payment	Purchase Journey (without catalog) with native payment [upto 20 steps and 5 API's]	4	
	Catalog + Native Payment	Purchase Journey with catalog and native payment [upto 20 steps and 5 API's]	5	
	Agentic AI + API	Journey with Set of steps and upto 3 APIs(Tool Integration)	3	Ex: Lead Generation/ Appointment Booking
Complex	Agentic AI + API	AI Agent (Generic / Catalog) - Training Data : Website, Complex pdf docs, Web Scrapping - API Tool Integration (more than 3) - API with Certificates - Whatsapp Formatted Messages (Images / Document / Interactive Buttons) [Upto 5 API's]	7-8	
IMPORTANT NOTES — Read before quoting				
Note: this is a high-level estimate based on typical project scopes. For each project presented, our team conducts a detailed assessment to define the precise scope of work and accurately determine the hours and resources required.				
SLA Start Date: Delivery clock starts ONLY after kick-off call is complete AND all client inputs are received: content/bot script, working API's, console credentials, brand guidelines etc. Any missing input pauses the clock.				
Scope = 1 Journey All estimates are per 1 journey / 1 bot type. For projects with multiple journeys, multiply accordingly or request a scoped estimate after discovery.				
The scale-up column shows how to stack effort for larger scopes (more steps, APIs, languages). Always apply scale-up rules before finalising a quote.				
AI Training: AI bot estimates may vary based on training data volume, quality and agent warm-up time. Confirm KB size and document complexity with the client before committing to a timeline.				
Also, effort estimates may increase if the bot requires multiple rounds of fine-tuning, prompt optimization, intent refinement, workflow adjustments, or further AI training to achieve the expected response accuracy and business outcomes				
Any new flow, API, or language added AFTER kick-off = formal change request and should be treated based on the type of categories mentioned above
